Scandinavian Turf Grass Testing (STGT) 3rd year of testing 2010

Please receive the results from the Scandinavian turf grass testing, 2010. The testing has been performed in different zones (northern and southern). In the northern zone the following testing site have contributed with trial results

- Appelsvoll, No - fairway
- Løken, No – lawn - extensive
- Mikkeli, SF, lawn – extensive
- Ylistaro, SF, lawn

In the southern zone the following locations are part of the testing network

- Landvik, No, - fairway
- Tystofte, DK – lawn

The results from all locations are complete and can be found in the enclosed files.

- 3rd YoU (year of use) results – northern and southern zone
- Visual merits – grouped into the following periods spring, summer and autumn
    - spring: April, May and June
    - summer: June and July
    - autumn: August, September and October

These table summarize the results of the testing. Results from individual testing sites can be found in

- Southern zone 2010
- Northern zone 2010

Additional information can be found in

- Varieties under test (administrative information)

It has not been possible for Fullerø Golfclub to provide data in 2010 – due to this the location is omitted.

Summary of the testing period 2006-2008 and 2008-2010 will follow in due course.

Best regards

Gerhard Deneken
