

Scandinavian Turf Grass Testing (STGT) 2st year of testing 2007

Please receive the results from the Scandinavian turf grass testing, 2007. The testing has been performed in different zones (northern and southern). In the northern zone the following testing site have contributed with trial results

- Appelsvoll, No - fairway
- Løken, No – lawn - extensive
- Mikkeli, SF, lawn – extensive
- Ylistaro, SF, lawn

In the southern zone the following locations are part of the testing network

- Landvik, No, - fairway
- Tystofte, DK – lawn
- Fullerø, Se – fairway

Unfortunately we have not been able to provide results from Fullerø in 2007. This will have consequences for the invoices which will be reduced with 80% of Fullerø's remuneration. Fullerø will only receive 20% of the budgeted amount in 2006.

The results from all other locations are complete and can be found in the enclosed files.

- STGT 2nd YEARS RESULTS NORTH 2007 - ranked according to visual merits
- STGT 2nd YEARS RESULTS SOUTH 2007 - ranked according to visual merits
- STGT VISUAL MERITS 2007 – grouped into the following periods spring, summer and autumn for both zones
 - spring: April, May and June
 - summer: June and July
 - autumn: August, September and October

These table summarize the results of the testing. Results/characteristics from individual testing sites can be found in

- STGT Southern zone 2007 documentation
- STGT Northern zone 2007 documentation

Additional information can be found in

- STGT Varieties 2007 - (administrative information)
- STGT Translations 2007 - (key words are translated into Danish, Finnish, Norwegian and Swedish)

At the moment we are working on a table showing the overwintering ability/ winter hardiness of the different varieties. This table is still under construction and will be available within a short period.

Best regards on behalf of Scandinavian Turf Grass Testing
